GWBW — Ghar-Wali Booking Waali

Multilingual Home Services Booking App

Version 1.0 | Product Owner: Shalaka Mhaske | May 2026

Field	Details
Product Name	GWBW (Ghar-Wali Booking Waali)
Document Version	1.0
Status	Live — Post-Launch Review
Product Owner	Shalaka Mhaske
Date	May 2026
Portfolio Link	sha204.github.io/GWBW-app

1. Executive Summary

GWBW is a mobile-first home services booking platform designed for Tier 2 and Tier 3 Indian cities. The app solves the fragmented, trust-deficit market for home services (cleaning, plumbing, electrical, etc.) by offering a multilingual booking experience in Marathi, Hindi, and English — enabling local service providers and underserved users to transact confidently in their native language.

The product was taken from ideation to live deployment by the product owner, demonstrating end-to-end ownership across discovery, design, development, and launch.

2. Problem Statement

2.1 User Problem

Homeowners and renters in Tier 2/3 Indian cities face major friction when booking local home services:

- No reliable platform exists in regional languages (Marathi, Hindi)
- Trust gap — no reviews, no pricing transparency, no accountability for service providers
- Language barrier prevents non-English speakers from using existing apps like Urban Company
- Manual, call-based booking is slow and error-prone

2.2 Business Problem

- Massive underserved market — 300M+ Hindi/Marathi speakers with internet access but no local-language booking solution
 - Urban Company and similar platforms focus on metro cities and English-only UX
 - Local service providers have no digital presence and lose business to informal referrals
-

3. Goals and Success Metrics

Goal	Metric	Target
Enable multilingual booking	Bookings completed in Marathi/Hindi	40% of total bookings
Grow user base	Active users (monthly)	500 users in 3 months post-launch
Onboard service providers	Verified providers on platform	50 providers in Month 1
Improve booking efficiency	Time to complete booking	< 3 minutes
Build trust	Average user rating	>= 4.2 / 5
Validate product-market fit	Week 2 retention rate	>= 30%

4. User Personas

Persona 1 — Sunita (Primary User)

Attribute	Detail
Name	Sunita Patil
Age	34
Location	Nashik, Maharashtra
Occupation	Homemaker / Part-time teacher
Language	Marathi (primary), basic Hindi
Device	Android smartphone (mid-range)
Pain Point	Cannot use Urban Company — English UI confuses her. Books maids/plumbers through WhatsApp referrals.
Goal	Book a reliable, affordable cleaning service quickly without language barrier

Persona 2 — Raju (Service Provider)

Attribute	Detail
Name	Raju Shinde
Age	28
Location	Pune outskirts
Occupation	Plumber (self-employed)
Language	Marathi, Hindi
Device	Android basic smartphone
Pain Point	No digital presence. Gets jobs only from neighbours. Inconsistent income.
Goal	Find more customers regularly, manage bookings without paperwork

5. Scope — Features

5.1 In Scope (v1.0 — Shipped)

Feature	Description	Priority
Multilingual UI	Full app available in Marathi, Hindi, English — switchable on home screen	P0
GPS Location Detection	Auto-detect user location for nearby service provider matching	P0
Service Categories	Cleaning, Plumbing, Electrical, Carpentry, Pest Control	P0
Service Booking Flow	Select service > Choose date/time > Confirm booking in 3 steps	P0
Provider Profiles	Photo, name, rating, service area, price range	P1
Booking Confirmation	SMS/in-app confirmation in user's preferred language	P1
Basic Rating System	Post-service 1-5 star rating by user	P1
Beta Testing with 50+ Users	Collected feedback from 50 beta testers in Pune/Nashik	P1

5.2 Out of Scope (v1.0) — Planned for v2

- In-app payments (UPI/Razorpay) — planned for v2
- Chat between user and provider
- Subscription/recurring bookings
- iOS version (Android-first)
- AI-powered service recommendations

6. User Journey — Core Booking Flow

Step	User Action	System Response
1	Opens app — selects language (Marathi/Hindi/English)	App loads in selected language, detects GPS location
2	Selects service category (e.g. Cleaning)	Shows available providers near user's location
3	Views provider profile — checks rating and price	Displays profile in user's selected language
4	Selects date and time slot	Shows available slots for chosen provider
5	Confirms booking	Sends SMS confirmation; booking appears in 'My Bookings'
6	Service is delivered	User receives prompt to rate the provider

7. Technical Stack

Layer	Technology Used
Frontend	FlutterFlow (mobile-first, cross-platform)
Backend	Supabase (database + auth)
Location	Google Maps API — GPS detection
Payments (v2)	Razorpay (planned)
AI Layer (v2)	Claude API — multilingual AI assistant for service queries
Hosting	Supabase + GitHub

8. Assumptions and Constraints

Assumptions

- Target users have Android smartphones with basic internet connectivity
- Service providers are willing to onboard digitally if the process is simple and in their language
- Majority of initial users will come from Pune and Nashik via word-of-mouth

Constraints

- No budget for paid ads — growth through organic channels and beta tester referrals
- Single product owner — no dedicated dev team; AI-assisted no-code build
- No in-app payment in v1 — cash/UPI on delivery

9. Risks and Mitigations

Risk	Impact	Mitigation
Low provider onboarding	High	Offer free listing; onboard manually via WhatsApp in v1
User trust deficit	High	Show verified badge, ratings, and photo of provider
Language translation errors	Medium	Human review of all Marathi/Hindi UI strings
GPS inaccuracy in small towns	Medium	Allow manual area selection as fallback
Low D7 retention	High	Send booking reminders; follow up post-service via SMS

10. Launch Summary — What Was Shipped

GWBW v1.0 was successfully launched as a live product. Below is a summary of outcomes:

Outcome	Result
Languages supported	3 (Marathi, Hindi, English)
Beta testers	50+ users
Product ownership	End-to-end — from roadmap to live deployment
Key learning	Marathi-language users completed bookings 2x faster than

Outcome	Result
	English UI users, validating the language-first hypothesis

11. Next Steps — v2 Roadmap

Feature	Rationale	Timeline
In-app UPI payments	Reduce cash friction; increase trust and repeat bookings	Q3 2026
Provider app (separate)	Let providers manage bookings, availability, earnings	Q3 2026
AI service assistant	Claude-powered chatbot to answer queries in Marathi/Hindi	Q4 2026
Subscription bookings	Weekly cleaning etc. — drives retention and revenue predictability	Q4 2026
Expansion to 3 new cities	Aurangabad, Kolhapur, Nagpur — high Marathi-speaking density	Q1 2027
